

# Carbery Sailing

## Navigator's Notes

Item	Diagram	Description
DR Plot		Course 090 True @ 11.5 Knots
DR Position		Time in 24 Hours
Estimated Position		As DR position but also accounting for tidal rate and drift
Visual Fix		Circle with dot, time and bearings
Electronic Fix		Time and method of fix

### Conversions

1 nm	1 Minute of Latitude
60 nm	1 Degree of Latitude
185.32 metres	1 cable
1 cable	0.1 nm
10 cables	1 nm
1 metre / second	1.94 knots

Carbery Sailing • Ahakista • Durrus • Co. Cork • Ireland

## Correcting Compass Error

**For Helmsman** is converting from true (T) to a compass (C) direction.

**For Chart** is converting a compass (C) or magnetic (M) direction to true (T).

**True (T)** direction is relative to true north (north pole).

**Variation** is the failure of the compass to point to true north. Variation is read from the compass rose on the chart. Variation is the same for all boats in the same area. Variation is the same for all directions in the same area.

**Deviation** is the failure of the compass to point to magnetic north. Deviation is caused by local magnetic fields on the boat. These fields may be caused by the engine, instruments or other electronic equipment, power wiring, tools or any other magnetic objects. Deviation is specific to an individual boat. Deviation changes with the boats heading. Deviation is read from the Deviation Card on the boat.

The outer rose (circle) represents true bearings on the chart where '0', at the top of the rose, always points to true north. True north is often represented by a star icon, a symbol of the north star, also known as Polaris.

The inner rose (circle) represents magnetic bearings on the chart where '0', in the upper part of the rose, points to the magnetic north pole at the time the chart was printed. Since the magnetic poles are moving and shifting we need a way to be able to update the chart to know where the magnetic pole is now. This is accomplished by reading the inside of the rose where an annual increase or decrease is written.

## Distance, Speed and Time

**Distance (nm)**

**Speed (kn)**

**Time (min)**

**Speed (S):**  $S = (60 \times D) / T$  – Speed in knots (kn) or nautical miles per hour

**Time (T):**  $T = (60 \times D) / S$  – Time in minutes

**Distance (D):**  $D = (S \times T) / 60$  – Distance in nautical miles (nm)

## Chart Work

Writing information on the chart in a consistent format is essential.

FIX

Fix from visual bearings

EP

Water track

DR

Ground track

WPT

Tidal set and drift

Visual fix

(arrowhead away from object)

**Compass** reading in 3 digits

045 T – True

045 M – Magnetic

045 C – Compass

**Time** recording in 4 digits (24HR)

10:30 AM – written as 1030

10:30 PM – written as 2230
